Reference List

Description	Site/Title	URL/Link
I used this resource to determine how to make the path to the excel file relative so that it would not need to be updated on different computers/accounts.	UiPath Forum	link
I used this resource to see how I could select an element from a dropdown; however, I went back to UiPath Studio and saw the activity and ignored the resource.	UiPath Forum	link
I used this resource to see how the “Invoke Code” activity worked as I needed to use it to add some of my own C# code to the process.	UiPath Forum	link
I used this resource to see how the “Add Data Row” activity worked since I wanted to use it to add records to my Results data table.	UiPath Forum	link
I used this resource to see how I could add Boolean values to an Object array within UiPath Studio, which I eventually figured out to do myself using an Invoke Code activity.	UiPath Forum	link
I used this resource to check if it was possible to check if a string contained a certain substring within UiPath Studio but remembered that I could use C# code to implement the checking myself, which I then did.	UiPath Forum	link
I used this resource to see how I could inspect the contents of an HTML table to see if the added record was contained within it. I did, however, use another method to check for this.	UiPath Forum	link
I used this resource to see how I could iterate through a data table in UiPath Studio to ensure I go through all records in each data table from the excel file.	UiPath Forum	link
Provided Resources		
I used this resource from the PDF to get an introduction to UiPath Studio and RPA.	UiPath Academy	link
I used the class recording that is in the Dropbox to assist me in completing this project.	Dropbox	link
I used this resource to help myself with automation relevant to Excel using UiPath Studio.	UiPath	link
I used this resource to better understand UI Automation.	UiPath Documentation	link
